

Problem 1

1. L_1 is not regular
2. L_2 is regular, $(0|1) * 1(0|1) * 1(0|1) * 1(0|1)*$
3. L_3 is regular, $(0|1)(00|01|10|11)*$
4. L_4 is regular, $(0)|(1)|(0(0|1) * 0)|(1(0|1) * 1)$
5. L_5 is not regular
6. L_6 is not regular

Problem 2.1

Theorem: L_1 is not regular.

Proof. Suppose L_1 is regular. Let p be the pumping length given by the pumping lemma.

Because any valid arithmetic expression requires balanced parenthesis, there must be an equal number of opening and closing parenthesis. We use this to show that L_1 is not regular.

Choose s to be $o^p c^p$, where o corresponds to the opening parenthesis and c corresponds to the closing parenthesis.

By the pumping lemma, $s = xyz$ and $xy^i z \in L_1$, for any $i \geq 0$.

Because $|xy| \leq p$, x and y must all be opening parenthesis.

This leads to a contradiction, Because $y \neq \epsilon$ and $xy^0 z \notin L_1$. Thus the lemma is broken. \square

Problem 2.2

Theorem: L_5 is not regular.

Proof. Suppose L_5 is regular. Let p be the pumping length given by the pumping lemma.

Choose s to be $0^p 110^p$.

By the pumping lemma, $s = xyz$ and $xy^i z \in L_1$, for any $i \geq 0$.

$|xy| \leq p$, so xy must contain only zeros.

By the pumping lemma, $xz \in L_5$, But xz cannot be a palindrome if $i \geq 1$ given that $y \neq \epsilon$ (x must contain at least one more zero than z). \square

Problem 2.3

Theorem: L_6 is not regular.

Proof. Suppose L_6 is regular. Let p be the pumping length given by the pumping lemma

Choose s to be $0^p 1^p$.

By the pumping lemma, $s = xyz$ and $xy^i z \in L_6$, for any $i \geq 0$.

y cannot be ϵ and $|xy| \leq p$, so y only contains zeros.

The pumping lemma says that $xy^2 z \in L_6$, but $xy^2 z$ contains more zeros than ones, and therefore cannot be in L_6 . \square

Problem 3

$$L_1 \quad S \rightarrow a \mid (S) \mid S + S \mid S - S \mid S * S \mid S \div S$$

$$L_2 \quad \begin{array}{l} S \rightarrow T1T1T1T \\ T \rightarrow \epsilon \mid 0T \mid 1T \end{array}$$

$$L_3 \quad \begin{array}{l} S \rightarrow 0T \mid 1T \\ T \rightarrow \epsilon \mid 0S \mid 1S \end{array}$$

$$L_4 \quad \begin{array}{l} S \rightarrow 0T0 \mid 1T1 \mid 0 \mid 1 \\ T \rightarrow \epsilon \mid 0T \mid 1T \end{array}$$

$$L_5 \quad S \rightarrow \epsilon \mid 0S0 \mid 1S1 \mid 0 \mid 1$$

$$L_6 \quad S \rightarrow \epsilon \mid SS \mid 0S1 \mid 1S0$$

Problem 4

Test

To test the CFG above, input test strings here, one per line. An empty line corresponds to the empty string. Results will be shown automatically. Derivations may not be available for longer strings or complex grammars.
